

ORIGAMI RISK

Values Collection

Take Control of the Collection Process

Spend more time managing risk and less time managing tasks related to the collection and aggregation of exposure data. Origami Risk – the leading risk management information system (RMIS) – streamlines the values collection process from end-to-end to improve the timeliness and quality of location-specific exposure data.

Platform Flexibility and Administrative Options

Multiple location structures in Origami Risk support businesses with complex or changing hierarchies. Robust yet easy-to-use administrative tools make it possible to completely tailor the process. Format intake screens as questionnaires or worksheets. Allow users to input values for a single location or across multiple locations. Define thresholds for variances between current and prior year values to trigger notifications that prompt for confirmation or the attachment of supporting documentation. Easily assign collection responsibilities to users and designate their backups.

Workflow and Communication Tools

Automated workflows in Origami Risk reduce the time-consuming back-and-forth associated with collecting exposure data. Keep employee contact information and roles up to date with secure, automated feeds from virtually any HR system. Create email templates for use in assignment, follow up, and requests for modification. Schedule reminders to alert users of upcoming due dates and incomplete assignments.

Ease of Access and Usability

For improvements in data accuracy and on-time completion, Origami Risk simplifies the process for colleagues juggling busy schedules and competing responsibilities. In assignment and follow-up communications, include direct links to collection portals. Customize intake instructions. Make it easier for users to spot keying errors by including the prior year's data alongside input fields. Give users the ability to reassign collection duties or complete data intake across several sessions.

Monitoring and Tracking

Quickly assess the progress of individual assignments or entire collection campaigns. Color coded status indicators provide administrators and other stakeholders with the ability to gauge collection status across locations. When required for reference, email exchanges are logged by location, making it easy to keep track of communications that would otherwise lay buried in email inboxes.
